

**AMENDMENTS TO THE SPECIFICATION:**

Please amend the Section title on page 10 as follows:

**DESCRIPTION OF ~~TWO~~ THE PREFERRED EMBODIMENTS**

Please amend the Abstract page on page 30 as follows:

System for multiple harnessing and complemented conversion of energy from sea waves, characterized in that it. The system includes a structure of vertical guides along which said the central floating body moves, a submerged captive-air tank, held up by said the floating body, with the body and the tank so arranged that the movement of the submerged tank is contrary to that of the central floating body, the. The movement of the central floating body and of the submerged tank being is transmitted to said the means of conversion of the movement into pneumatic, electrical or hydraulic energy. The system shows high energy harnessing efficiency.
